

ABSTRACT OF THE DISCLOSURE

An apparatus and method is provided that performs display and printing of thumbnail images. Thumbnail
5 image data for display corresponding to a long shaped image has the same visible angle as a thumbnail image for display and printing of a wide shaped image. This permits the long shaped thumbnail image to be displayed and printed without a non-display portion. The thumbnail
10 image data for printing corresponding to the thumbnail image for printing that have a different visible angle from a thumbnail image for displaying and printing 15 by 90° and do not have the non-display portion are stored in a memory.
